STABILITY OF STRUCTURES										
1	Course Title:	STABILITY OF STRUCTURES								
2	Course Code:	INS5223								
3	Type of Course:	Optional								
4	Level of Course:	Second	Cycle							
5	Year of Study:	1								
6	Semester:	1								
7	ECTS Credits Allocated:	7.50								
8	Theoretical (hour/week):	3.00								
9	Practice (hour/week):	0.00								
10	Laboratory (hour/week):	0								
11	Prerequisites:									
12	Language:	Turkish								
13	Mode of Delivery:	Face to f	ace							
14	Course Coordinator:	Doç. Dr. M.ÖZGÜR YAYLI								
15	Course Lecturers:	Doç. Dr. M. Özgür YAYLI								
16	Contact information of the Course Coordinator:	bdeliktas@uludag.edu.tr 224 2900744 Uludağ Univ. Müh.Mim Fak. İnşaat Müh. Böl. Görükle, Bursa								
17	Website:	http://insaat.uludag.edu.tr								
18	Objective of the Course:	 Understanding the stability of structures. Elastic buckling. Calculation of critical buckling loads and buckling loads in higher modes using various methods. Explanation of torsion buckling and lateral buckling. 								
19	Contribution of the Course to Professional Development:	 Understanding and examining buckling phenomenon in structural engineering, To be able to investigate the buckling behavior of structural elements and systems under compressive load and the problems that may arise, Obtaining buckling loads in columns and frames with various methods. 								
20	Learning Outcomes:									
		1	 Understanding and examining buckling phenomenon in structural engineering, 							
		2	• To be able to investigate the buckling behavior of structural elements and systems under compressive load and the problems that may arise,							
		3	 Obtaining buckling loads in columns and frames with various methods. 							
		4								
		5								
		6								
		7								
		8								
		9								
		10								
21	Course Content:									
		Co	ourse Content:							
Week	Theoretical Practice									

1	Stability of equilibrium, large displace theory of columns	ement							
2	Large displacement theory of column columns with primitive curvature, col with eccentrically loaded	ns, lumns							
3	Inelastic buckling of columns								
4	General theory of columns, interload columns	led							
5	Variable cross-section columns, app methods for buckling loads	oroximate							
6	Sequential approximation methods								
7	Finite difference method								
8	Variation methods, Rayleigh-Ritz Me	ethod							
9	Rayleigh-Ritz Method, finite element	t method							
10	finite element method								
11	Beam-columns, buckling of frames								
12	Buckling of frames, torsion buckling	of bars							
13	Lateral buckling of bars								
14	Lateral buckling of bars, accent stab	ility							
22	Textbooks, References and/or Other Materials:	r	• Alexander Chajes, Pinciples of Structural Stability Theory, Prentice-Hall, 1974 (paperback edition Waveland Press, 1993)						
Activit	es		Number	Duration (hour)	Total Work Load (hour)				
Theore	ical		Hill, ⁴ 1952	3.00	42.00
