SEISMIC ISALOTED BUILDING DESIGN											
1	Course Title:	SEISMIC	C ISALOTED BUILDING DESIGN								
2	Course Code:	INS5245									
3	Type of Course:	Optional									
4	Level of Course:	Second	Cycle								
5	Year of Study:	1									
6	Semester:	1									
7	ECTS Credits Allocated:	7.50									
8	Theoretical (hour/week):	3.00									
9	Practice (hour/week):	0.00									
10	Laboratory (hour/week):	0									
11	Prerequisites:	None									
12	Language:	Turkish									
13	Mode of Delivery:	Face to face									
14	Course Coordinator:	Dr. Ögr. Üyesi SERKAN SAĞIROĞLU									
15	Course Lecturers:	Dr.Bahadır Şadan									
16	Contact information of the Course Coordinator:	Dr.Öğr.Üye. Serkan Sağıroğlu									
17	Website:										
18	Objective of the Course:	This course focuses on the low damage design concept, summarizing the principles of seismic isolation, introducing the seismic isolator types and teaching seismic isolated building design.									
19	Contribution of the Course to Professional Development:	This course provides students with an understanding of performance-based design and low damage design philosophies, understanding of the basic principles of earthquake insulation and insulation units, following and interpreting new techniques and current national / international earthquake insulation standards, understanding the types and causes of damage in buildings, insulation unit and earthquake. It will contribute to designing insulated buildings.									
20	Learning Outcomes:	1									
		1	Understanding the performance based and low dame design concepts								
		2	Understanding principles of seismic isolation and learning the types of seismic isolators								
		3	gain the ability to follow national and international seismic isolation codes								
		4	to be able to understand the types of structural damages on buildings and the causes								
		5	To be able to design seismic isolators and seismic isolated buildings								
		6									
		7									
		8									
		9									
		10									
21	Course Content:										
	Course Content:										

Week	Theoretical		Practice							
1	Introduction, seismicity of Turkey, tec past earthquakes and structural dam	tonics, ages								
2	Basics of seismic isolation, difference between seismic isolated and conver systems, performance based and low damage design principles	es ntional v								
3	Seismic isolator types, behaviors, pro	os and								
4	Seismic isolation in Turkey and in the	e world								
5	Ground motion for seismic isolation of	lesign								
6	Mechanical properties and design of isolators	rubber								
7	Mechanical properties and design of isolators (continued)	rubber								
8	Mechanical properties and design of pendulum isolators	friction								
9	Seismic isolation in Turkish Building Code 2017 and other international co	Seismic des								
10	Seismic isolator tests and evaluation results	of test								
11	Design of seismic isolated buildings: architectural design and detailing with examples	า								
12	Computer aided seismic isolated buil	ding
