18	Objective of the Course:	The theory of elliptic curves brings important areas of mathematics such as abstract algebra, number theory and related fields. The aim of this course is to make the students get all connections among all these areas. The goal is to teach the elementary theory of elliptic curves. So students can know the basic theory of elliptic curves.	
19	Contribution of the Course to Professional Development:		
20	Learning Outcomes:		
		1	Use elliptic curves to solve some problems of mathematics.
		2	Learn the group structure of the points on the elliptic curves.
		3	Learn the j-invariant of an elliptic curve and isomorphisms and endomorphisms of the curves
		4	Learn the singular curves and determine group law of singular curves.
		5	Learn the torsion points of an elliptic curve and learn division polynomials of an elliptic curve.
		6	Learn elliptic curves over finite fields and counts the number of the points on these curves.
		7	Give some results about the numbers of the points of the elliptic curves over finite fields
		8	Learn the elliptic curves over Q and the torsion subgroup and the Lutz-Nagell theorem.
		9	Learn the method of descent of Fermat and the Mordell-Weil theorem.
		10	Learn the elliptic curves over C.
