

THE ANATOMY OF FORELIMB AND HINDLIMB

1	Course Title:	THE ANATOMY OF FORELIMB AND HINDLIMB
2	Course Code:	VAN6023
3	Type of Course:	Optional
4	Level of Course:	Third Cycle
5	Year of Study:	1
6	Semester:	1
7	ECTS Credits Allocated:	5.00
8	Theoretical (hour/week):	2.00
9	Practice (hour/week):	2.00
10	Laboratory (hour/week):	0
11	Prerequisites:	None
12	Language:	Turkish
13	Mode of Delivery:	Face to face
14	Course Coordinator:	Prof. Dr. HÜSEYİN YILDIZ
15	Course Lecturers:	Yok/None

18	Objective of the Course:	To make comparison of the anterior and posterior leg regions and subregions, which have a separate surgical importance in domestic mammals and to enable veterinary candidates to gain practical knowledge in clinical diagnosis and operative practice.
19	Contribution of the Course to Professional Development:	
20	Learning Outcomes:	
	1	Learns in detail the morphological features of the front and hind limb regions of domestic mammals, separating them into general regions and specific subregions.
	2	According to the animal species, the anatomy of the important operation sites to be performed in the anterior and posterior leg regions is appropriately learned together in detail.
	3	Learns the formation of the anterior and posterior leg regions based on clinical examinations and how to reach them from the outside and their relations with neighboring structures.
	4	Learns the anatomical features of the sites for anesthesia and the innervation regions of the nerves, which are frequently used in diagnostic and operative applications, especially in the anterior and posterior leg region.
	5	Learns the normal structures and positions of the anterior and posterior leg region formation with radiographic images.
	6	Learns how to practice in clinical diagnosis and operation applications by learning practical information.
	7	Makes interpretations by establishing functional features related to the anatomical structure with the formation of the anterior and posterior leg regions.
