18	Objective of the Course:	To give information about prostheses, indications, applications, modifications and possible complications; to provide an understanding of amputee rehabilitation. To gain the ability to plan and implement the appropriate treatment program for amputees.								
19	Contribution of the Course to Professional Development:	Within the scope of this course, students are given the ability to prepare a personalized prosthesis rehabilitation program by choosing appropriate evaluation methods for amputees.								
20	Learning Outcomes:									
		1	Recognize the parts that make up the prosthesis and have information about the production processes.							
		2	Decides the appropriate prosthesis for the patient with amputated or congenital limb deficiency.							
		3	Plans and applies the necessary evaluations according to the rehabilitation stages in patients with prosthesis indications.							
		4	Checks the fit of the prosthesis in patients using prosthesis, makes the necessary biomechanical adjustments and analyzes the results.							
		5	Gain awareness of advanced technological applications in the field of prosthesis and rehabilitation.
