

SYSTEMS DYNAMICS AND CONTROL

1	Course Title:	SYSTEMS DYNAMICS AND CONTROL
2	Course Code:	END3039
3	Type of Course:	Optional
4	Level of Course:	First Cycle
5	Year of Study:	3
6	Semester:	5
7	ECTS Credits Allocated:	3.00
8	Theoretical (hour/week):	2.00
9	Practice (hour/week):	0.00
10	Laboratory (hour/week):	0
11	Prerequisites:	Without Prerequisites
12	Language:	Turkish
13	Mode of Delivery:	Face to face
14	Course Coordinator:	Öğr.Gör.Dr. MESUT ŞENGİRİN
15	Course Lecturers:	-
16	Contact information of the Course Coordinator:	E-Mail: smesut@uludag.edu.tr Phone: 0 224 294 19 87 Adres: BURSA U.Ü., Müh. Fakültesi, Makine Müh. Bölümü, 16150 Görükle/Bursa
17	Website:	http://www20.uludag.edu.tr/~mtd/Mak3002.htm
18	Objective of the Course:	Develop an understanding of the elements of classical control theory and the concept of feedback as applied to the industrial control and automation systems. Drive mathematical model of systems and analyze dynamic behaviors of systems with the concepts of transfer functions and block diagrams. In particular analyze the transit and steady state characteristics of various types of the systems. Concept of control algorithms, controller design, and properties of PID controllers. Describe and analyze frequency response of the control systems.
19	Contribution of the Course to Professional Development:	It contributes to the creation of control knowledge, which is one of the fundamental topics of engineering.
20	Learning Outcomes:	
	1	Be familiar with the inputs, outputs, and components of a control system. Understand the difference between open-loop and closed-loop (feedback) control systems and understand the advantages of feedback control.
	2	Apply the mathematical methods such as differential equations and Laplace transformation to engineering subjects.
	3	Model various engineering systems, including mechanical, electrical, thermal and fluid systems.
	4	Understand the role of the transfer function and block diagram forms in the system dynamics and the control systems modeling.
	5	Understand the concept of the transient and steady state behavior parameters of the control systems and their effects on the system performances.
	6	Determine system stability and stability limits for certain classes of feedback systems.

		7	Understand the concepts of the proportional, integral and derivative control actions and apply them to the design of industrial controllers.		
		8	To use MATLAB/Simulink with facility to aid in the analysis and design of control systems		
		9			
		10			
21	Course Content:				
	Course Content:				
Week	Theoretical		Practice		
1	Introduction and general evaluation of the course.: What are the control and the automatic control.				
2	Introduction of open-loop, closed-loop and feedback control systems. Application cases.				
3	Laplace transformations: definition, standard input functions and their Laplace transforms.				
4	Inverse Laplace transformations.				
5	System dynamics and introduction to modeling: transfer functions and classification of systems according to their transfer functions and their dynamic behaviors.				
6	Block diagrams, their characteristics and reductions.				
7	Reduction of block diagrams with disturbances				
Activites			Number	Duration (hour)	Total Work Load (hour)
Theoretical	behavior characteristics.		14	2.00	28.00
Practicals/Labs			0	0.00	0.00
10	Self study and preparation of transient response characteristics of the systems and steady state behavior of the		14	3.00	42.00
Homeworks			0	0.00	0.00
11	Projects Steady state errors constants and steady state errors		0	0.00	0.00
Field Studies			0	0.00	0.00
12	Midterm exams Stability of linear systems, Routh-Hurwitz stability criteria and application of the criteria		1	10.00	10.00
Others			0	0.00	0.00
13	Final Exams Basic control actions and controller design, PID controller and its main features.		1	10.00	10.00
Total Work Load					90.00
Total work load/ 30 hr					3.00
ECTS Credit of the Course					3.00

22	Textbooks, References and/or Other Materials:	1. Automatic Control: System Dynamics and Control Systems (in Turkish) İbrahim YÜKSEL, 7th. Edition, Nobel 2011 2. Automatic Control Systems, Benjamin C. Kuo (translated into Turkish by A. Bir), Literatür, 1999 3. Solved Problems of Automatic Control, System Dynamics and Control Systems (in Turkish) , İbrahim YÜKSEL, Mesut ŞENGİRGİN, Gürsel ŞEFKAT, 2nd. Edition, Dora 2011 4. Analysing and Solution of Engineering Sysetms with MATLAB (in Turkish) İbrahim YÜKSEL, 3rd. Edition, Nobel 2004 5. Modern Control System, R. C. Dorf & R.H. Bishop, 10th.Edition, 1994, Prentic Hall, 6. Control System Design, G. C. Goodwin, S.F. Graebe, M.E. Salgado, 2001, Prentic Hall 7. Feedback Control Systems, J. Van De Vegte, Prentice Hall International Edition, 3rd Edition 2002 8. Modeling, Analysis, and Control Dynamic Systems, W.J. Palm III, John Wiley & Sons. Inc., 1999
